

Aqua4Push

DATA UPLOAD UTILITY

FEATURES

- Scheduled data collection from multiple sensors
 - PT2X - Pressure/Temperature
 - CT2X - Conductivity/Temperature
 - TempHion - pH/ISE/Redox
 - T16 - Temperature
- Automatic barometric adjustment for absolute pressure sensors
- Built-in telemetry capabilities
- Generates single data file (.csv)
- Automatic data file upload to designated Internet site (FTP)
- Easy import into spreadsheets and databases

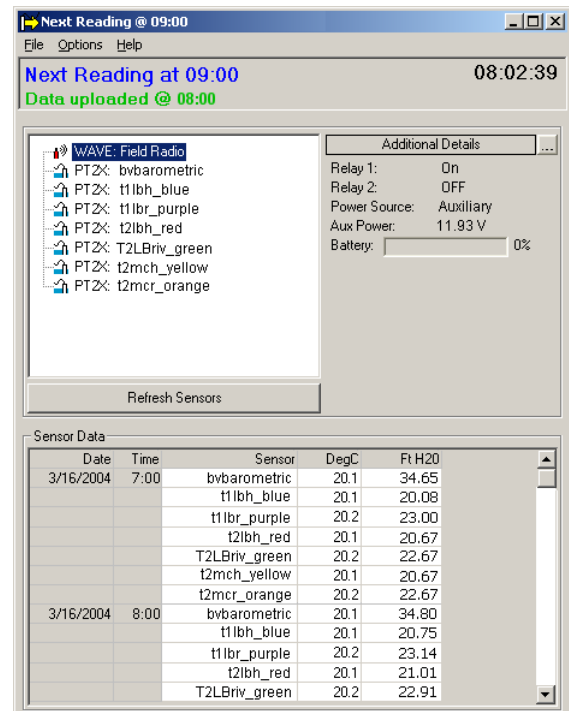

DESCRIPTION

As our world grows more complicated, environmental concerns are increasing at an enormous pace. With so much data to collect and analyze, it is becoming increasingly difficult for consulting companies, water districts, and government agencies to find the manpower and time (not to mention budget!) to record and recover data across large geographical areas.

Imagine a system that automatically captures data from multiple sites and pushes it up to an Internet site at specific timed intervals. No more going out to each well to recover data. No more time lag in getting data to decision makers. No more need to email data between offices. The most current data is always at your fingertips from anywhere with an Internet connection.

BENEFITS

- Fewer trips to site means better focusing of staff
- Early detection of problems means:
 - Less cleanup cost
 - Less environmental damage
 - Less down time
- Better information = better business decisions
